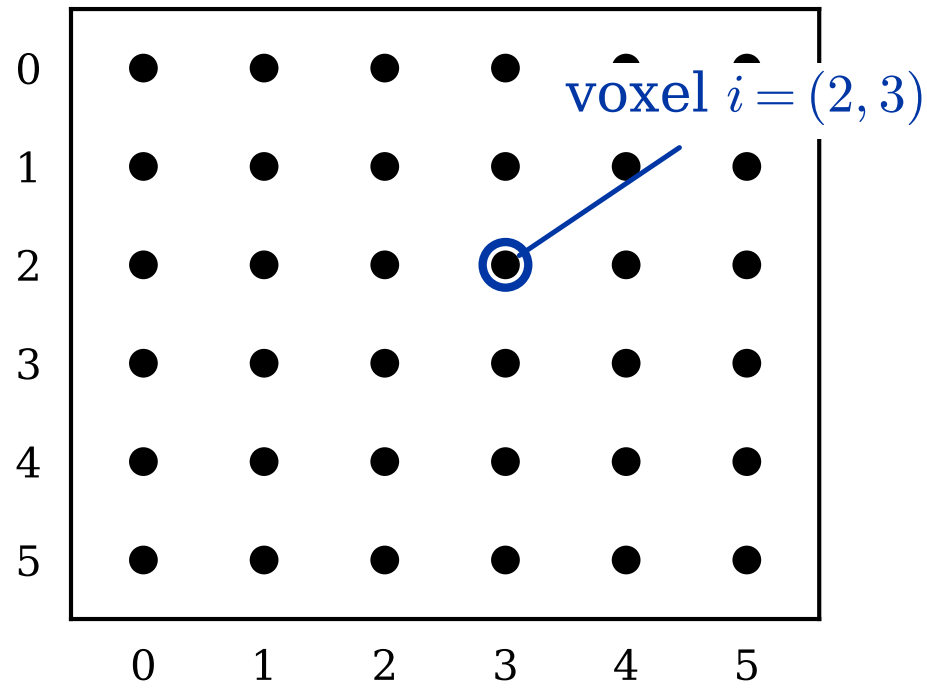
$\Omega \subset \mathbb{R}^2$: just the positions ($D = 2$)

$|\Omega| = 6 \times 6 = 36$ voxels



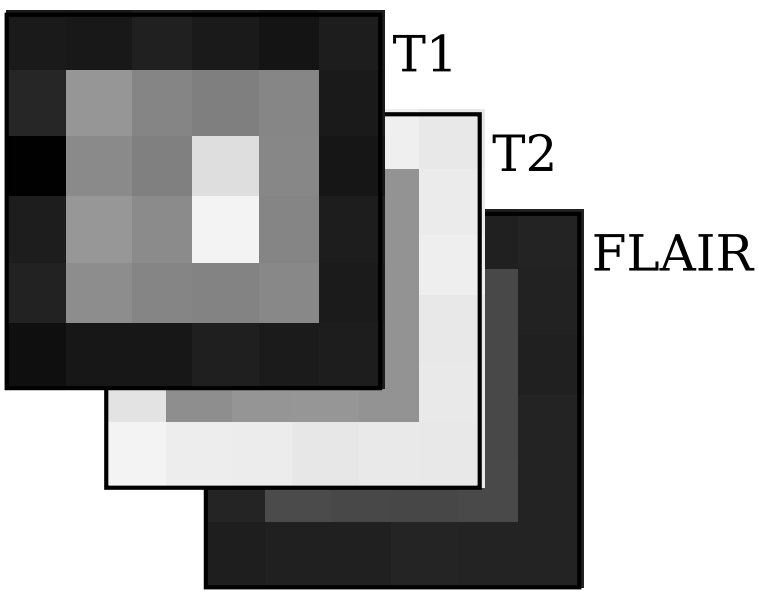
$x \in \mathbb{R}^{1 \times \Omega}$ ($M = 1$, e.g. CT)

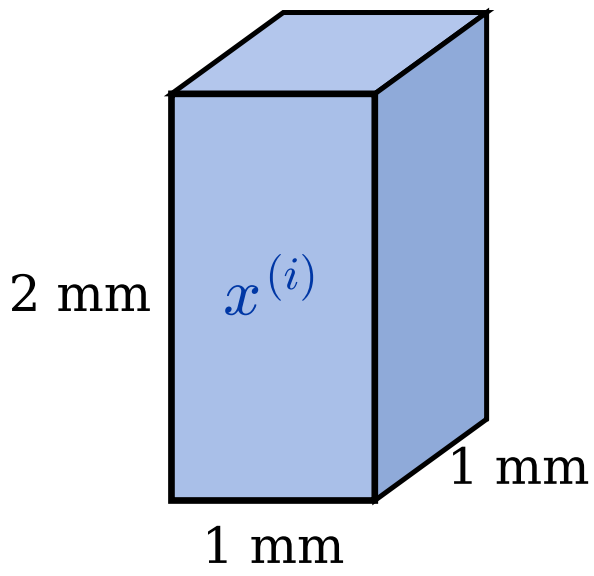
one number per voxel, $x^{(i)}$

0.1	0.1	0.1	0.1	0.1	0.1
0.2	0.6	0.5	0.5	0.5	0.1
0.0	0.5	0.5	0.9	0.5	0.1
0.1	0.6	0.5	1.0	0.5	0.1
0.1	0.6	0.5	0.5	0.5	0.1
0.1	0.1	0.1	0.1	0.1	0.1

$x \in \mathbb{R}^{M \times \Omega}$, $M = 3$ channels

(MRI sequences): shape $3 \times 6 \times 6$



one voxel = a brick, one value


$1 \times 1 \times 2$ mm (anisotropic)
