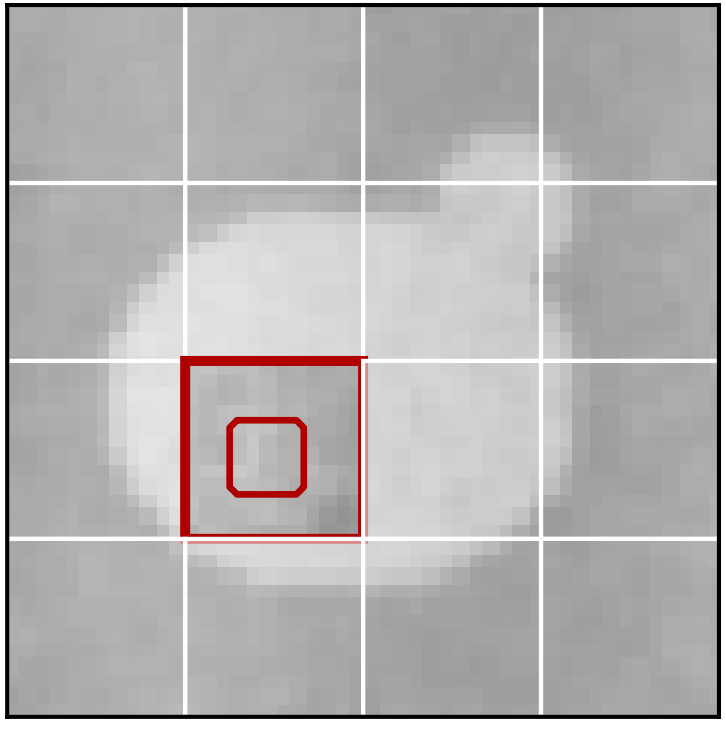
4×4 patches of 12×12



white = no tumour (15 of 16)

in a patch without tumour:

label has 0 tumour voxels
$\Rightarrow\ I = U = 0\ \Rightarrow$ Dice $= 0/0$ (NaN)

fix: $\frac{2I+\epsilon}{U+\epsilon}$, or skip/handle
empty classes in the loss

the network also never sees
the whole scan at once
